	Each record is cleaned before transfer. Each track on the record is captured as a WAV file, where it then goes through a process of noise reduction and normalization before converted to CD or tape. Each CD is labeled with the album name and individual track information.

Reel-to-Reel	\$49.95 per hour (running time)
	Reel to Reel tapes may have been recorded with different speeds, different recording methods (e.g. left channel/right channel) and also can be single-sided or double-sided. To determine the audio length we need to test the tape for all of these factors. The audio is converted to a WAV file and then noise reduction and

	normalization is performed before transferring to CD or tape.
